

Insert & Mail Sorting

Relia-Vote™ Automated Mail Ballot Inserting & Sorting Solutions

The results are in.

Relia-Vote™ brings automated integrity to mail ballot processing.

X

“Some of the tangible benefits of the Pitney Bowes Relia-Vote™ solution are the control and integrity it provides. If voters call to ask about their ballot, I don’t have to call a vendor. I can tell those people with confidence when their ballot was mailed. **This solution allows (election) officials to drill down into a specific ballot and validate where, when and how each piece was processed and exactly what is in the envelope.”**

—Leslie Hoffman, YAVAPAI COUNTY RECORDER

Win the popular vote.

- Assure the correct ballot is sent to the correct voter
- Sort mail ballots to the lowest postage rates
- Track processes from ballot assembly through the USPS to the return
- Validate the legitimacy of each mail ballot envelope
- Correctly format voter address and assign an Intelligent Mail® (IMb) barcode
- Open/sort to district or precinct levels
- Verify voters' signatures
- Provide complete audit trail

Predict the
outcome of your
mail balloting process.

In America, we vote. And absentee or mail balloting has become an increasingly popular option. That has sent election officials looking for an alternative to labor-and time-consuming manual processing.

Today, five of the nation's six largest counties use the Pitney Bowes Relia-Vote™ System. And our modular configurations are also helping smaller jurisdictions automate many aspects of this essential American right.

Integrity, outbound & inbound

As part of the outbound process, Relia-Vote™ solution brings mail ballot inserting and addressing into one automated process with an end-to-end audit trail. The Relia-Vote™ solution also provides the ability to validate voters' signatures and sort the returned ballot envelopes during the inbound process.

Instead of manually inserting and then checking mail ballot envelopes against voter registration lists, the Pitney Bowes voter preparation software syncs with your existing voter files. Then, using the assigned Intelligent Mail® barcode, it secures the highest USPS discounts, and tracks the delivery status of every piece—creating easily accessible records.

The right to assemble—at high speeds.

x

Verifying signatures is primary.

Originally designed for the banking industry, the Relia-Vote™ System uses Auto Signature Verification handwriting analysis.

It compares signatures from ballot envelopes to those captured in your voter registration system.

The Manual Signature Verification

feature can also present the scanned signature side by side with the one on file for visual confirmation by an election official.

Speed counts. Ballot envelopes are sorted down to the precinct level at speeds of up to 42,000 per hour—quickly separating challenged ballot envelopes. Smaller jurisdictions can enjoy the same automated processing but with a reduced footprint and speeds of up to 18,000 per hour. **And it's all done with accuracy,** less risk and a complete audit trail of the entire process.

Every ballot envelope accounted for.

Whether they are being sent across town or across the country, our TrackMyVote™ solution can follow ballot envelopes throughout the mail stream. And by tracing individual pieces through the USPS, election officials can respond to delivery inquiries from voters, candidates or the media.

We want to earn
your vote, too.

No matter the dimensions of
your need, Relia-Vote™ delivers
USPS Intelligent Mail® barcode
compliance, automated ballot
envelope assembly/auditing and
TrackMyVote™ delivery validation.

Look like a
clear winner
to all parties.
